revvity

Solutions for cardiovascular disease.

Physiologically relevant results for fast flowing research

Human cardiovascular diseases are a significant health problem worldwide due to the large number of people affected and the incomplete knowledge of the cardiovascular process's pathogenesis. Cardiovascular disorders can develop in several different diseases such as hypertension, hypercholesterol, atherosclerosis, heart fibrosis or strokes; all of which have ties with the regulation of blood pressure, fat transportation, artery diameter and the state of inflammation in arteries and vessels.

Alpha is a versatile, bead-based platform that enables you to assay the most complex samples in one well and with no wash steps. HTRF is a fast, sensitive, homogeneous, and ready to use assay platform with no wash steps.

Advance your research on Cardiovascular disorders and benefit from Revvity's broad offering of reagent technologies:

- Products covering all significant contributors to a cardiovascular disorder involved in cardiomyocyte health, vasorelaxation, artery inflammation and heart fibrosis.
- Easy-to-use Alpha, HTRF and LANCE Ultra assay technologies enable the cell-based detection of cytokines, biomarkers, and cell signaling proteins, providing fast and accurate results."

What's your focus? Whatever your target, HTRF is your solution

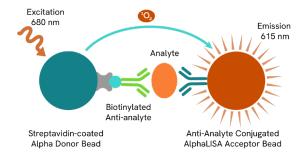

Our kits are available in larger formats (5,000 - 10,000 - 20,000 - 50,000 or 100,000). Check our website for details and availability.

Expert services to satisfy your exact needs

- In addition to providing ready-to-use solutions, Revvity's team of experienced experts also works hand-in-hand with clients to create custom solutions.
- From compound characterization, to small- and large-scale reagent preparation and full assay development, Revvity is the ideal trusted partner to support all your needs.

Keep your therapeutic research moving forward with faster, more robust, physiologically relevant results. Call us or visit Revvity.com.
